

Practise Questions – Probability

1. Two dice are thrown. Find the probability that :
 - (a) the total of the numbers on the dice is 7,
 - (b) the first die shows 4,
 - (c) the total of the numbers on the dice is greater than 6,
 - (d) the total of the numbers on the dice is 12,
 - (e) both the dice show the different numbers,
 - (f) the sum of the numbers shown by the dice is less than 6,
 - (g) the sum of the numbers shown by the dice is exactly 8.
2. The probability that X and Y will be alive ten years hence is 0.8 and 0.6 respectively. What is the probability that both of them will be alive ten years hence ?
3. What is the chance that a leap year, selected at random will contain 53 Sundays ?
4. A problem in statistics is given to three students A, B, C whose chances of solving it are $\frac{1}{2}$, $\frac{1}{3}$, $\frac{1}{4}$ respectively. What is the probability that the problem will be solved ?
5. A committee of three is to be chosen from a group consisting of 5 men and 5 women. If the selection is made at random, find the probability that (a) all three are men, (b) two are men.
6. The key for a door is in a bunch of 10 keys. A man attempts to open the door by trying keys at random discarding the wrong key. What is the probability that the door is opened in the fifth trial?
7. The probabilities of two events A and B are 0.25 and 0.40 respectively. The probability that both A and B occur is 0.15. The probability that neither A nor B occurs is:
8. The probability that A speaks truth is $\frac{4}{5}$, while its probability for B is $\frac{3}{4}$, The probability that they contradict each other when asked to speak on a fact is:
