

cat Command - Examples

cat file_name

```
aws ~/../../../../../../workground git:Umain cat file_name
File: file_name
1 this is a file
aws ~/../../../../../../workground git:Umain |
```

cat jayesh.txt

```
aws ~/../../../../../../workground git:Umain cat jayesh.txt
File: jayesh.txt
1 this is Jayesh from GfG
aws ~/../../../../../../workground git:Umain |
```

cat file1 file2

```
aws ~/../../../../../../workground git:Umain cat file1 file2
File: file1
1 this is file1
File: file2
1 this is file2
aws ~/../../../../../../workground git:Umain |
```

cat -n file_name

```
aws ~/../../../../../../workground git:Umain cat -n file_name
1 this is a file
aws ~/../../../../../../workground git:Umain
```

cat > newfile_name

```
aws ~/../../../../../../workground git:Umain cat > newfile_name
hi this is abhishek
^C
```

cat > jayesh1

```
aws ~/../../../../../../workground git:Umain cat > jayesh1
Jayesh from GfG
^C
```

cat file1.txt file2.txt > merged_file.txt

```
aws ~/../../../../../../workground git:Umain /usr/bin/cat file2 file1 > merged_file.txt
aws ~/../../../../../../workground git:Umain cat merged_file.txt
File: merged_file.txt
1 this is file2
2 this is file1
aws ~/../../../../../../workground git:Umain |
```

```
cat -s file_name
this is a file
```

```
cat file_name1 >> file_name2
```

```
git:Umain cat file_name1 >> file_name2
```

```
tac file_name
```

```
cat -n file2
~/../../../../workground git:Umain tac ~/.bashrc
cat file1 >> file2
eval "$(oh-my-posh init bash --config ~/.config/lambda.omp.json)"
eval "$(fzf --bash)"
eval "$(zoxide init bash)"
export PATH="/home/elish4h/.local/bin:$PATH"
# Added by Antigravity CLI installer
```

```
c -E file_name
this is a file$
```

```
c -A file_name
this is a file$
```

```
cat "filename" | more
```

```
cat "filename1" "filename2" "filename3" > "merged_filename"
```

```
cat "file1" "file2" "file3" > "merged123"
```

```
cat *.txt
```

```
cat >> geeks.txt
```

```
cat -- "-dashfile"
```

```
~/../../../../workground git:Umain echo 'this is a dashfile' > -dashfile
~/../../../../workground git:Umain cat -- "-dashfile"
```

	File: -dashfile
1	this is a dashfile

```
cat -- "-jayesh2"
```

```
~/../../../../workground git:Umain echo 'this is a dashfile as well' > -jayesh2
~/../../../../workground git:Umain cat -- "-jayesh2"
```

	File: -jayesh2
1	this is a dashfile as well

```
cat file1 file2 jayesh.txt > merged.txt
```

```
~/../../../../workground git:Umain cat file1 file2 jayesh.txt > merged.txt
~/../../../../workground git:Umain cat merged
[bat error]: 'merged': No such file or directory (os error 2)
~/../../../../workground git:Umain cat merged.txt
```

	File: merged.txt
1	this is file1
2	this is file2
3	this is Jayesh from GfG

```
cat *.txt
```

```
~/../../../../workground git:Umain cat *.txt
```

	File: jayesh.txt
1	this is Jayesh from GfG

	File: merged.txt
1	this is file1
2	this is file2
3	this is Jayesh from GfG

	File: merged_file.txt
1	this is file2
2	this is file1

cd Command - Examples

cd [directory]

```
~/ ./. /.../.../workground git:>main cd [directory]
cd: directory placeholder usage

NAME
  ls - list directory contents

SYNOPSIS
  ls [OPTION]... [FILE]...

DESCRIPTION
  List information about the FILES (the current directory by default).
  Sort entries alphabetically if none of -cftuvSUX nor --sort is speci-
  fied.

  Mandatory arguments to long options are mandatory for short options too.

  -a, --all
      do not ignore entries starting with .

  -A, --almost-all
      do not list implied . and ..

intro(2)                               System Calls Manual                               intro(2)

NAME
    intro - introduction to system calls

DESCRIPTION
    Section 2 of the manual describes the Linux system calls. A system call
    is an entry point into the Linux kernel. Usually, system calls are not
    invoked directly: instead, most system calls have corresponding C li-
    brary wrapper functions which perform the steps required (e.g., trapping
    to kernel mode) in order to invoke the system call. Thus, making a sys-
    tem call looks the same as invoking a normal library function.

    In many cases, the C library wrapper function does nothing more than:

    • copying arguments and the unique system call number to the registers
      where the kernel expects them;

    • trapping to kernel mode, at which point the kernel does the real work
      of the system call;

intro(1)                                General Commands Manual                                intro(1)

NAME
    intro - introduction to user commands

DESCRIPTION
    Section 1 of the manual describes user commands and tools, for example,
    file manipulation tools, shells, compilers, web browsers, file and image
    viewers and editors, and so on.

NOTES
    Linux is a flavor of UNIX, and user commands under UNIX work similarly
    under Linux (and lots of other UNIX-like systems too, like FreeBSD).

    Under Linux, there are GUIs (graphical user interfaces), where you can
    point and click and drag, and hopefully get work done without first
    reading lots of documentation. The traditional UNIX environment is a
    CLI (command line interface), where you type commands to tell the com-
    puter what to do. This is faster and more powerful, but requires find-
    ing out what the commands are and how to use them. Below is a bare min-
    ... [output truncated for display]

PRINTF(1)                                User Commands                                PRINTF(1)

NAME
    printf - format and print data

SYNOPSIS
    printf FORMAT [ARGUMENT]...
    printf OPTION

DESCRIPTION
    Print ARGUMENT(s) according to FORMAT, or execute according to OPTION:

    --help display this help and exit

    --version
        output version information and exit

    FORMAT controls the output as in C printf.  Interpreted sequences are:

    \"    double quote
    ... [output truncated for display]

rm Command - Examples

rm [OPTION]... FILE...

```
~/ ./. /.../.../workground git:>main rm [OPTION]... FILE...  
rm: cannot remove '[OPTION]...': No such file or directory  
rm: cannot remove 'FILE...': No such file or directory
```

```
~/ ./. /.../.../workground git:>main |
```

rm a.txt

```
~/ ./. /.../.../workground git:>main rm a.txt  
  
~/ ./. /.../.../workground git:>main |
```

rm b.txt c.txt

```
~/ ./. /.../.../workground git:>main rm b.txt c.txt  
  
~/ ./. /.../.../workground git:>main |
```

rm -i d.txt

```
~/ ./. /.../.../workground git:>main rm -i d.txt  
rm: remove regular file 'd.txt'? y  
  
~/ ./. /.../.../workground git:>main |
```

rm e.txt

```
~/ ./. /.../.../workground git:>main rm e.txt  
  
~/ ./. /.../.../workground git:>main |
```

rm -f e.txt

```
~/ ./. /.../.../workground git:>main rm -f e.txt  
~/ ./. /.../.../workground git:>main |
```

rm *

```
~/ ./. /.../.../workground git:>main rm *  
rm: invalid option -- 'a'  
Try 'rm ./-dashfile' to remove the file '-dashfile'.  
Try 'rm --help' for more information.  
  
~/ ./. /.../.../workground git:>main |
```

rm -r *

```
~/ ./. /.../.../workground git:>main rm -r *  
rm: invalid option -- 'a'  
Try 'rm ./-dashfile' to remove the file '-dashfile'.  
Try 'rm --help' for more information.

touch Command - Examples

touch [options] file_name

```
~/. /.../..workground git:>main touch [options] file_name  
touch: missing file operand  
Try 'touch --help' for more information.
```

```
~/. /.../..workground git:>main |
```

touch File1

```
~/. /.../..workground git:>main touch File1  
~/. /.../..workground git:>main |
```

touch File1_name File2_name File3_name

```
~/. /.../..workground git:>main touch File1_name File2_name File3_name  
~/. /.../..workground git:>main |
```

touch Doc1 Doc2 Doc3

```
~/. /.../..workground git:>main touch Doc1 Doc2 Doc3  
~/. /.../..workground git:>main |
```

touch -a fileName

```
~/. /.../..workground git:>main touch -a fileName  
~/. /.../..workground git:>main |
```

touch -a Doc1

```
~/ ./. /.../.../workground git:>main touch -a Doc1  
~/ ./. /.../.../workground git:>main |
```

touch -c fileName

```
~/ ./. /.../.../workground git:>main touch -c fileName  
~/ ./. /.../.../workground git:>main |
```

touch -c -d fileName

```
~/ ./. /.../.../workground git:>main touch -c -d fileName  
touch: invalid date format 'fileName'  
  
~/ ./. /.../.../workground git:>main |
```

touch -m fileName

```
~/ ./. /.../.../workground git:>main touch -m fileName  
~/ ./. /.../.../workground git:>main |
```

touch -d "17 Mar 2023" Geek.txt

```
~/ ./. /.../.../workground git:>main touch -d "17 Mar 2023" Geek.txt  
~/ ./. /.../.../workground git:>main |
```

touch -r second_file_name first_file_name

```
~/ ./. /.../.../workground git:>main touch -r second_file_name first_file_name  
~/ ./. /.../.../workground git:>main |
```

touch -t YYMMDDHHMM fileName

```
~/ ./. /.../.../workground git:>main touch -t YYMMDDHHMM fileName  
touch: invalid date format 'YYMMDDHHMM'  
  
~/ ./. /.../.../workground git:>main |
```

> filename

```
~/ ./. /.../.../workground git:>main > filename  
~/ ./. /.../.../workground git:>main |
```

> /path/to/filename

```
~/ ./. /.../.../workground git:>main > /path/to/filename  
/bin/sh: line 1: /path/to/filename: No such file or directory
