

IPL Statistics Project — Figures Gallery

All visualisations produced in R (ggplot2); seasons 2008–2018

1. Distribution of Target Runs

Distribution of Target Runs (n = 686)

Histogram scaled to density with kernel density overlay; dashed line marks the mean

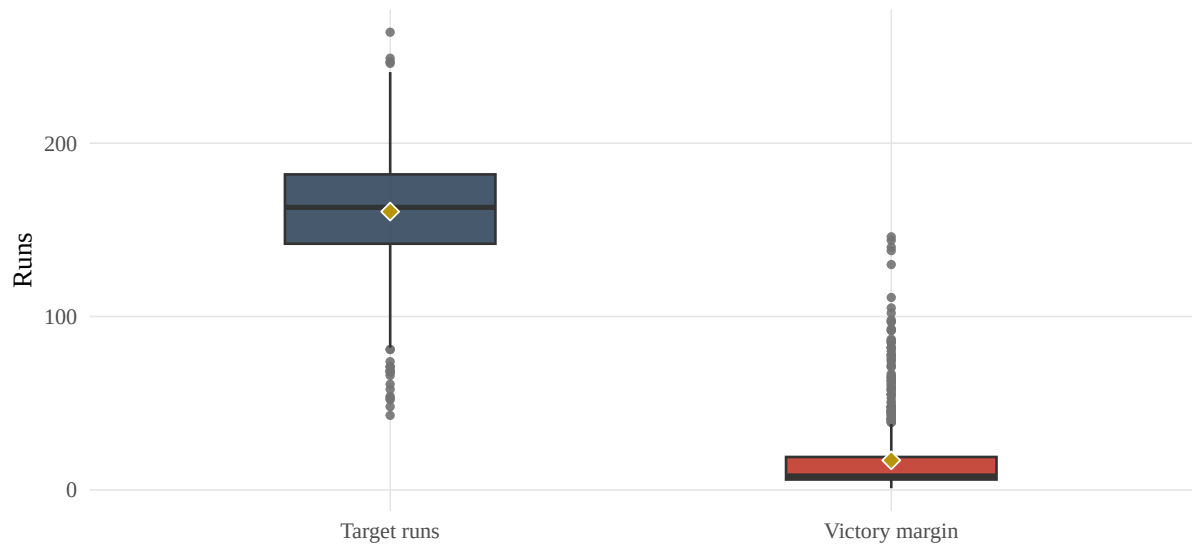

IPL seasons 2008–2018; the 10 abandoned/no-result matches are excluded.

2. Box-and-Whisker Comparison

Spread and Skew: Victory Margins vs Target Runs

Boxes span Q1–Q3; median line and gold mean diamond shown.
The margin box is compressed, with far-out outliers.

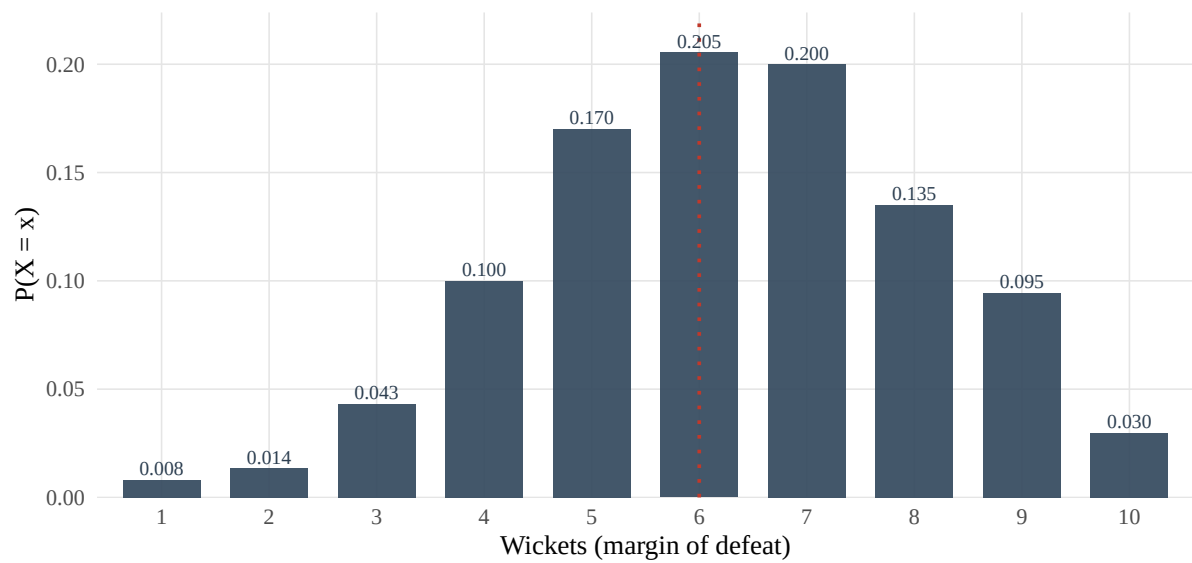

Margins available for 685 decided matches (the single tied match has no margin).

3. Empirical PMF of Wicket Margins

Empirical PMF of Winning Margins When Chasing

$P(X = x)$ for wickets lost by the batting side; mode at $x = 6$ ($\hat{p} = 0.205$)

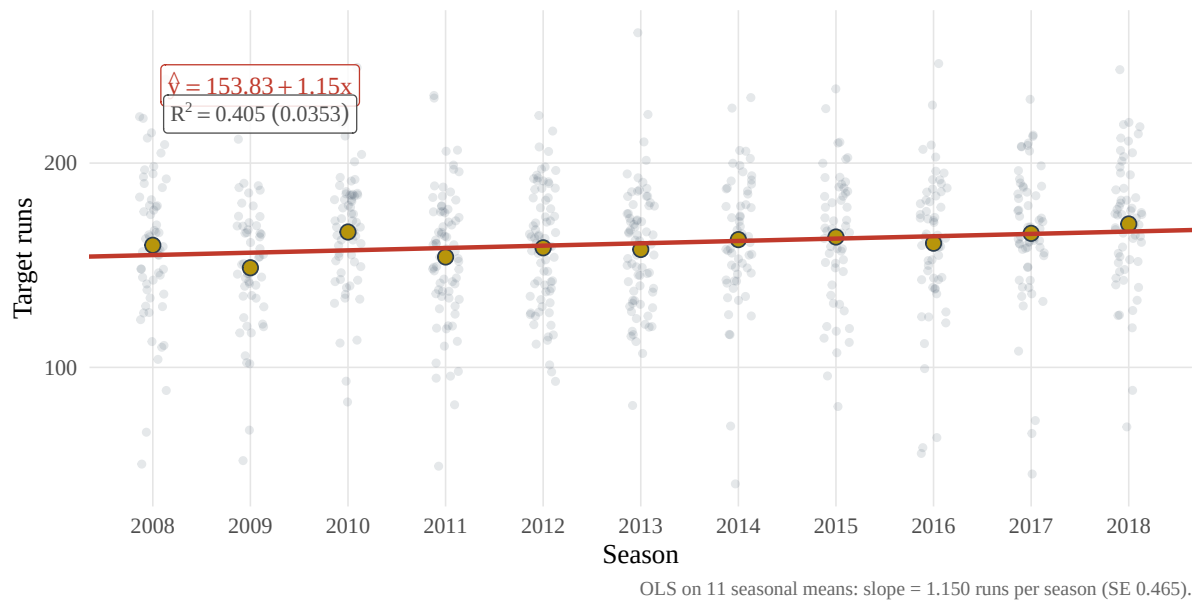

All 370 chase wins, seasons 2008–2018.

4. Regression: Target Runs Across the Decade

Target Runs Drift Upward Across the Decade

Faded points: individual matches. Gold dots: seasonal means. Red line: least-squares fit through seasonal means.

5. Binomial Proportion Estimates with 95% CIs

First-Innings Advantage: Binomial Proportion Estimates

Win proportions with 95% confidence intervals; chasing clears the fair-coin benchmark, batting first does not.
